

ASTLEY CLARKE

Opening Your Locket Guide

If you hold the locket, with the front facing you, on the right hand edge - at 2 o'clock if you imagine it as a clock face - there is a lip which will enable you to pop open the locket.

Below are two images showing the locket from the front and the side, the arrows point to the opening

The best way to open is to use your thumbnail / fingernail between the two sides of the lip which will pop open the locket... I hope the images below will help you with this.
